

and a whole lot of fun!

is the whole world of working things

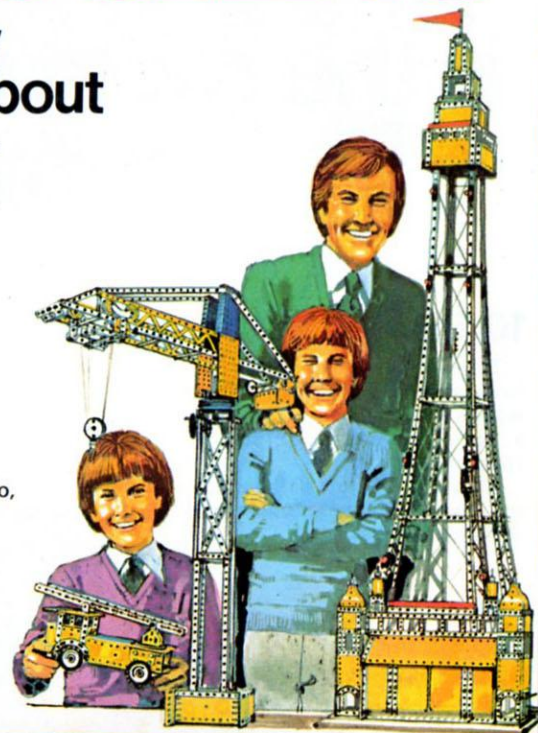

MECCANO

MECCANO

is a great way of learning about engineering-through play

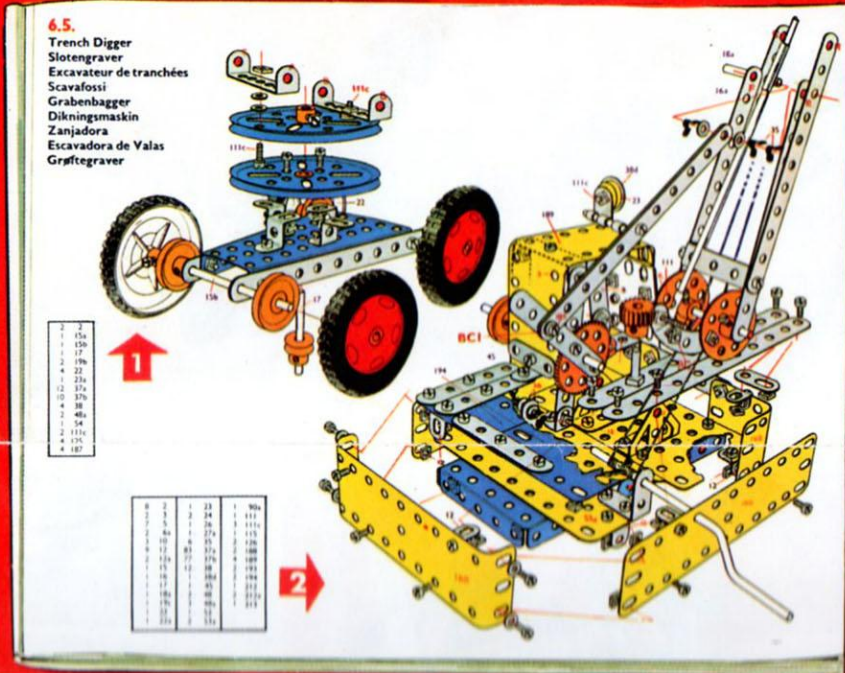

Meccano lets you build realistic working models of the things you see around you everyday, like bridges... bulldozers... cranes... tractors... and you can invent and design lots of your own Meccano models too.

Through playing with Meccano, boys—and dads too!—get endless hours of pleasure, and at the same time gain valuable knowledge of the way real things work—knowledge which can benefit a boy throughout the whole of his life.

MECCANO

is easy to build—even for beginners

MECCANO

is the most comprehensive construction system in the world!

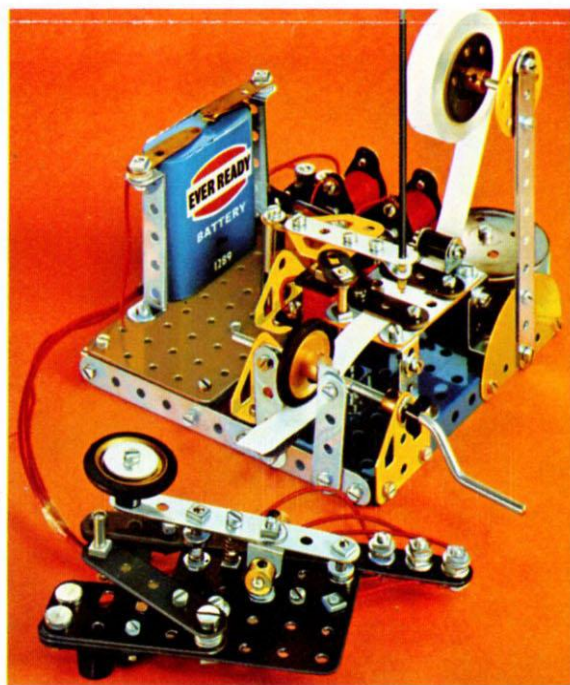

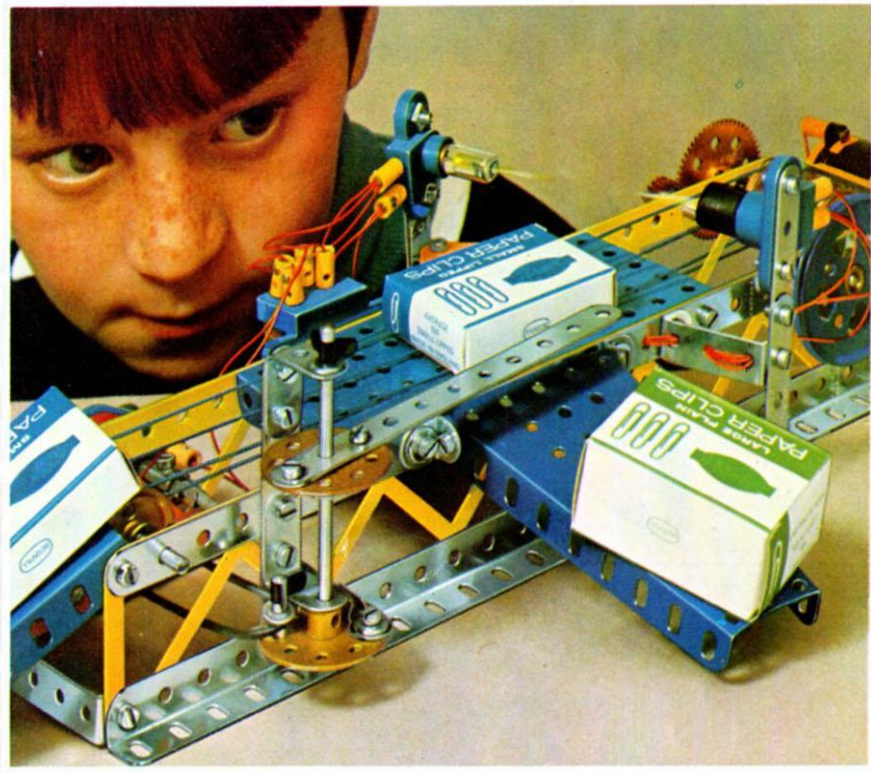

10 fabulous standard sets

There's a Meccano Set to cater for every stage of a model-makers development—ten basic sets in all. And whenever you want scope for building bigger and better models, you can convert your existing set into the next larger size simply by adding a conversion set. Also, there's a special introductory set—Pocket Meccano (non-convertible).

All Meccano parts are properly engineered, and are so tough they can take even the most enthusiastic handling. They are handsomely finished in enamelled colours or durable plating.

Special motorised and electronic sets

5ME Motorised Electronic Set has all the Meccano parts of a standard No. 5 set with plans for making 85 working models—plus a powerful electric motor and electronic parts for automation. *Sets 3M and 4M—motorised sets*—both have a fixed-ratio gear $4\frac{1}{2}$ volt DC motor, which has a stop, forward and reverse lever and is battery operated. Set 3M has instructions for building 51 working models, Set 4M instructions for building 66 working models.

Set 4EL—Special Electrical Set

This battery-operated set is a fascinating introduction to the world of electricity. There are instructions and everything you need to build 100 models, including a variety of special equipment such as a simple bell, compass, transformer, electric field gun and several kinds of electric motor.

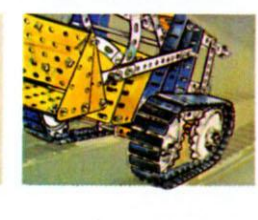

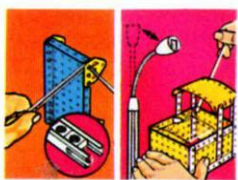

8 conversion sets—to make your existing set larger

There's no need to worry about growing out of your Meccano set. When you want more scope for building bigger and better models, simply convert your existing set into the next larger one by adding a conversion set. For example—Set No. 5 plus Conversion Set 5X = Set No. 6.

9 and 10—the big sets—for the boy who has everything!

The sets every boy dreams of owning! The De Luxe No. 9 set has 1,220 parts, the Grand De Luxe No. 10 set nearly 3,000! Both come in handsome oak finished cabinets, and provide tremendous scope for inventive minds. Literally hundreds and hundreds of terrific working models can be built. *Including nuts and bolts.

and there are dozens of interesting extras to add!

Super Tool Set
Automatic nut holder—holds twenty nuts at a time—long screwdriver and flexible drive spanner all make model building that much easier.

Gears Set
Contains Gear wheels, sprockets and chain, plus instructions for making dozens of drives and gear units.

Mechanisms Set
Makes things like clutches, differentials, disc brakes and free wheels. Full instructions provided.

Electric Motors
Illustrated—3-12 volt DC reversible motor with 6-ratio gear box. Battery operated. Just one of the Meccano electric motors available to give your models power.

Clockwork motors
Illustrated—Meccano No. 1 clockwork motor with reversing mechanism. This is intended for driving larger models. For simpler models—non-reversible Magic Motor.

Electronic Set
Add this exciting electronic accessory set to your existing sets and control your motorised models automatically. Contains photo-electric cell.

Caterpillar Track Pack
Now your Meccano models can have real, working caterpillar tracks with the Meccano Track Pack. Fits metal and Plastic Meccano.
