 12 Nuts and Bolts 25 mm (1")
 Work Box Set

Dinky Toys

And don't forget terrific Dinky Toys too. New models every month, fabulous working parts, fantastic detail. Dinky Toys keep getting better.

Dinky Kits

Not plastic and glue but real metal Dinky Toys that you can build and paint.

Motors...Gears...Tools... Track Pack.

A Meccano set is just the start of much bigger things. You can add a whole range of accessories to make your models even more exciting. Like these.

1. Gears Set Contains gear wheels, sprockets and chain and instructions for building dozens of drive and gear units.

2. Conversion Sets When you've finished building the models in a particular set, you'll want to build bigger and better models. So convert your existing set – Plastic or Metal Meccano – into the next size up by adding a Conversion Set. For example, Set No. 5 + Conversion Set 5X = Set No. 6.

3. Super Tool Set Contains an automatic nut holder (takes up to 20 nuts at a time), a long screwdriver and a flexible drive spanner. Model-making with this set is easier and much more fun.

4. Electric Motors A choice of three electric motors is available for driving your models, including a battery operated 3-12 volt DC reversible motor with a built-in 6-speed gearbox.

5. Electronic Control Set This exciting set enables you to control your electric powered models automatically. Comes complete with real photo-electric cell.

6. Steam Engine This is a real steam power unit, which works on methylated spirits and water. Fitted with a reverse drive lever, it produces sufficient power to drive a wide range of your own Meccano models.

7. Caterpillar Track Pack Models like bulldozers and tanks look much more like the real thing when you fit them with working caterpillar tracks. The tracks in the Track Pack fit Plastic Meccano (and metal Meccano by using part No. 63. Couplings not included). 125 track links make up into 46 $\frac{1}{2}$ inches (1190 mm) of track.

8. Clockwork Motors The non-reversible Magic Motor and reversible No. 1 Clockwork Motor will drive lots and lots of Meccano models.

9. Mechanisms Set Contains a complete set of instructions for making gearboxes, clutches, a differential, brakes, a free wheel unit and lots of other exciting mechanisms.

MECCANO[®]

The growing tradition

Fabulous models from Meccano - the growing tradition

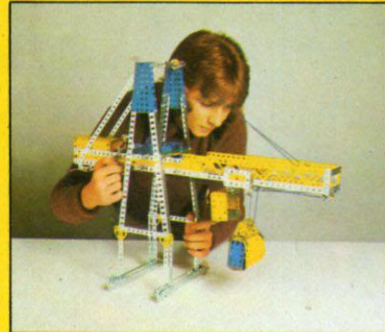

PLASTIC MECCANO

This is the ideal way for the under 7's to start building Meccano. The pieces are big, colourful and easy to handle, so model-making is really easy. Plastic Meccano has everything a youngster needs for building lots of fun-filled models. There's virtually no limit to the

number that can be made with each set. All sorts of models that really work. There are 4 standard sets, complete with easy to follow plans in colour, as well as 2 conversion sets. And Plastic Meccano can be used with metal Meccano and Multikit.

MECCANO

Standard Metal Meccano – still the most popular construction system in the world. And no wonder. You can build an unlimited variety of models with

Meccano. And you can power them with one of the Meccano motors. What's even more exciting is that Meccano is compatible with Multikit. So you can build some really terrific models when you combine the two.

MULTIKIT

Multikit is brand new. It's Meccano like it's never been before. In every Multikit there's an all-metal cab and 4 wide chunky wheels. So your models will be more realistic than ever. **The Army Multikit Book of Models** contains full instructions for 10 exciting, different models.

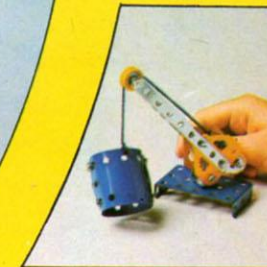

Personnel trucks, tanks, guns, an armoured car and searchlight carrier. There are real, working tank tracks and guns that fire harmless missiles.

The Highway Multikit Book of Models contains full instructions for 8 exciting, different models. Tippers, crane trucks, scraping and grading machines.

Both instruction books are brand new, with full colour, step-by-step photographs to make model building really easy.

POCKET MECCANO

Pocket Meccano contains plans for 25 real Meccano models. But that's only the start. You can build hundreds of models to your own designs. That's half the fun, inventing models of your own.

MECCANO CLOCK KITS

Meccano clocks. They're real, weight-driven working timepieces – so dad will be interested as well.

There are two models to choose from – the non-chiming No. 1 Clock and the chiming No. 2 Clock. Both clocks can be made to run for 1½ hours for each foot that the driving weight drops. The higher the clocks are hung, the longer they will run on one winding.
