

Wonderful Mechanical Toys for Boys to make

This is part of a giant Meccano Derrick. Look at it carefully, boys! It is a typical piece of Meccano work, the real thing, just like an engineer makes it—a gem of mechanical construction. You can build and play with this wonderful Derrick when you buy Meccano, and you can also build hundreds of other models: a real Loom which will weave you beautiful colored fabrics; Cranes and Bridges; Towers with Elevators working up and down; every model you make is a real machine and works perfectly.

MECCANO

Toy Engineering for Boys

Meccano Outfits contain highly finished strips, plates, girders, pulley wheels, gears, rods, nuts and bolts, &c., each representing a genuine engineering part. By fitting these parts together with the help of the big Book of Instructions, any boy can build hundreds of working mechanical models. Each outfit is a complete toy store.

If you like Cranes, you can build one—a *real* Crane which raises and lowers loads. You can then make a Bridge or an Aeroplane or an Elevator or an Automobile or a Tank or a Submarine, hundreds of them.

If you never make the same model twice, you can go on making new ones for years.

INSIST ON MECCANO

There is no other Real Engineering System

How To Start Meccano

The main thing is to get started, and it doesn't much matter which outfit you buy first. If you buy a No. 0 costing \$1.50, you can make 78 fine models of the smaller type; and when you are ready you can get a No. 0A, costing \$1.50, which makes your No. 0 into a No. 1; then you can build 105 models altogether of the better type.

If you start with a No. 3, costing \$9, you can build 196 models of a splendid engineering type, and you can follow this by getting a No. 3A outfit, costing \$6, which converts your No. 3 into a No. 4, giving you a range of 247 models.

The whole Meccano system is progressive, and you can work right up to No. 6 no matter where you start.

How Many Models?

425 Now—and More Coming

There is no limit to the number of models you can build with Meccano. Along with your outfit from No. 1 to No. 6 you get instructions for building 326. This Book of Instructions goes free with the outfit; then comes Book No. 2, with 100 more prize models of great beauty. This is an entirely new Manual of Instructions, just published, and it costs 35 cts. Before you have finished all these, there will be more models ready. Always something new.

No Study Necessary

Don't worry because you don't know anything about engineering. That doesn't matter at all.

You get with your Meccano outfit a large beautifully-illustrated Book of Instructions, which makes it all delightfully simple, and you can begin to build the minute you open your outfit at home. Very soon you will know more about real engineering than all your friends put together.

PRICES

No. 00 Outfit	\$1.00	MECCANO OUTFITS WITH ELECTRIC MOTORS				
" 0 "	1.50	No. 1X	\$4.50
" 1 "	3.00	" 2X	7.50
" 2 "	6.00	" 3X	12.00
" 3 "	9.00	" 5X	25.00
" 4 "	15.00	Outfits No. 4, 5 and 6 also contain an Electric Motor.				
" 5 "	20.00					
" 6 "	40.00					

Each Outfit contains full instructions

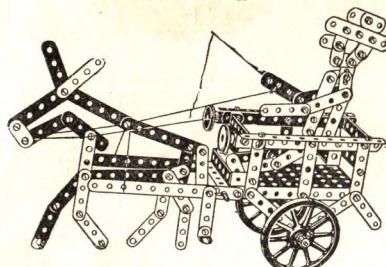

ACCESSORY OUTFITS

No. 00A, for converting	No. 00	into	No. 0	\$.50
" 0A, "	"	"	0 "	1 1.50
" 1A, "	"	"	1 "	2 3.00
" 2A, "	"	"	2 "	3 3.00
" 3A, "	"	"	3 "	4 6.00
" 4A, "	"	"	4 "	5 5.00
" 5A, "	"	"	5 "	6 20.00

Inventor's Accessory Outfit 3.00

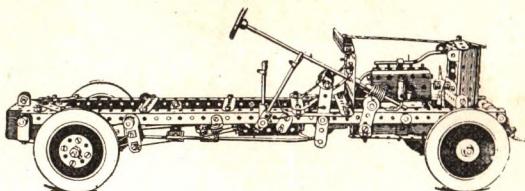

An Accessory Outfit for use with any regular Meccano set. Contains large pulleys, cranks, sprocket wheels, sprocket chain, and many new parts not in the other outfits.

Giddap!

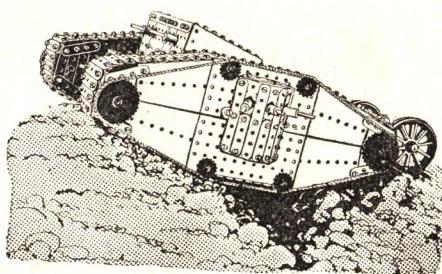

You can build models of this kind by the hundred and get loads of fun out of them,

Auto Chassis

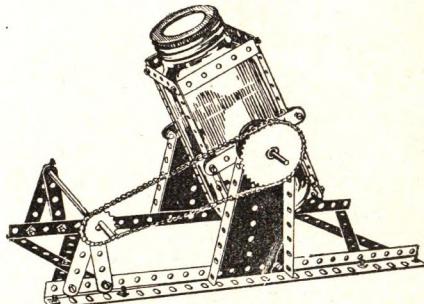

or you can build a real Automobile Chassis with perfect mechanism, clutch, worm steering gear, speeds, transmission, universal joint, differential, etc.;

Battle Tank

then a fine "Tank" model designed by Officers in France who fight in the real ones, a model of perfection, design and construction;

Butter Churn

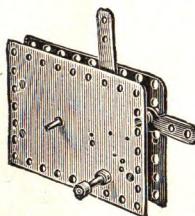

or a Butter Churn with which you can manufacture fresh butter for the family. You can set to work churning in a few minutes, the model is such an easy one to make.

Then You Can Make Your Models Run Like Real Machinery

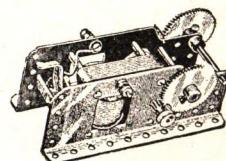

To add to the fun of Meccano toy-building, we have introduced the most wonderful series of toy motors ever designed.

They are pierced with the regular Meccano equidistant holes, and they fit smoothly into position and become part of the model itself. They make the wheels hum round. They operate Cranes, Lifts, and the Ferris Wheel, Elevators, &c. They double the fun.

Meccano Spring Motor

No current required—always ready for use. This is a clockwork motor, strong and durable, built on the Meccano system—the side plates having the standard perforations. Builds right into a Meccano model and makes it run like real machinery Price, \$3.00

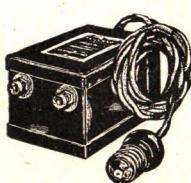

Meccano Electric Motor

Patented

E 1 Electric Motor \$2.00
E 2 with extra gears and control lever.. 4.00

The most powerful toy electric motor made. Connects direct to your models and drives by gear wheels and shafting—no belt to slip. Runs on house current with Meccano Transformer or on batteries, at very low cost. It's a dandy!

For 110 Volts A.C. (60 cycles)

Meccano Transformer

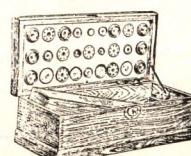

\$2.00, WONDERFUL VALUE
(In Canada \$3.00
duty free)

Makes the ordinary house wiring system the boy's own power-house. Does away with all the expense and trouble of dry cells.

Meccano Builder's Cabinet

No. 1 \$ 5.00
No. 2 10.00

Handsome oak cabinet with lock. Inside of lid is fitted with metal plate to take Meccano gears and wheels as shown in picture. Price does not include gears and wheels.

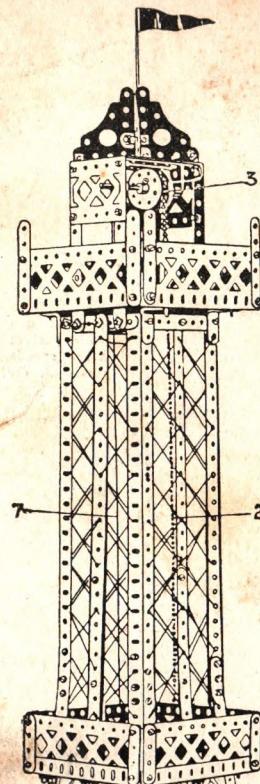

This page is exactly the size of the Meccano Manual of Instructions, and this is the style of illustration which it contains.

Look at the model closely and you will see how easy it would be for you to build up this splendid Eiffel Tower.

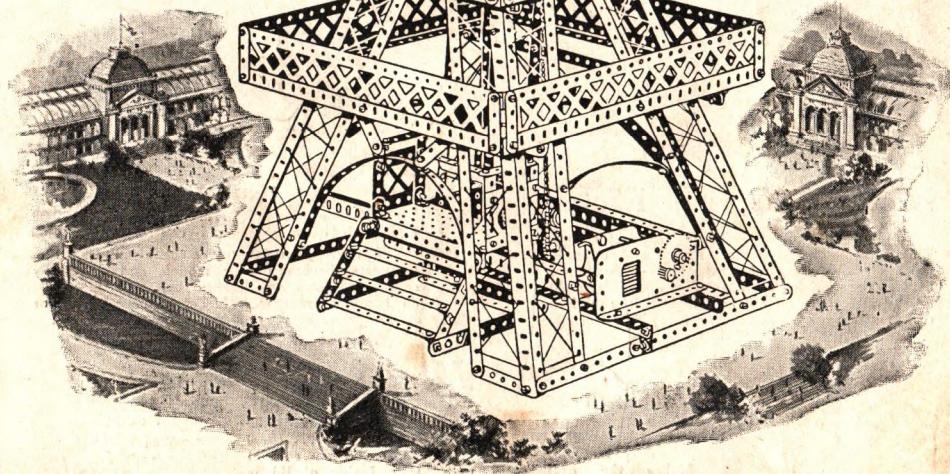

This is no make-believe Tower. It *works*, boys, with the elevator going up and down, carrying passengers to view the wonders of Paris.

**You
