## INSTRUCTIONS

FOR OUTFITS Nos. 0 to 3

Price 35 Cents

MECCANO COMPANY  
INCORPORATED

No. 56A

ELIZABETH,

NEW JERSEY

AMERICAN EDITION

# A TALK WITH NEW MECCANO BOYS

**M**ECCANO OUTFITS contain accurately-made and highly-finished engineering parts and enable every movement known to mechanism to be reproduced in model form. With Meccano you can accomplish more than with any other constructional toy, for no other system has its possibilities. No study is needed to enable anyone to build models with Meccano—the genius is in the Meccano parts.

You never come to the end of Meccano fun. There is always more ahead—always some new, ingenious and interesting model to build. Each one, as it is completed, “tuned up,” and set going, brings a joy and satisfaction beyond anything that boys have ever previously experienced.

As you progress in Meccano you obtain a greater variety of parts, gear wheels, pulley wheels, worm wheels, couplings, cranks, and all manner of perfectly-made real engineering parts. These enable you to construct

complicated mechanical movements without any difficulty. The most wonderful feature of Meccano is that it is *real engineering*; it is fascinating and delightful and yet so simple that even an inexperienced boy may join in the fun without first having to study or learn anything.

## THE LIFE OF A MECCANO BOY

A Meccano boy is the happiest boy in the world. His Outfit is his passport into a great new land of pleasure and fun—Meccanoland, where happy boys live. He has joined the great fraternity of boys who like to make things, and his fun increases with every new Meccano model that he builds. Time never hangs heavily on his hands, for with his Meccano Outfit he can make an endless variety of toys and copy any machine or structure that he cares to.

We are at all times glad to hear from Meccano boys and to correspond with them and help them with their models. Sometimes a little difficulty may be experienced in building a particular model, or some help required in designing new ones. We want all Meccano boys to get the utmost pleasure from their Outfits and we like to have them write to us and tell us what they are doing.

## How to Build with Meccano

Follow the instructions closely at first, and build the models just as you see them. Then take each model and try to improve our design. Every model can be made in a dozen different ways. Screw up all the nuts and bolts firmly and you will find that you can play with the trucks, cranes, signals, etc., and obtain many hours of fun.

Meccano is sold in different sized outfits, (see page 59). All parts are of the same high quality and finish, the larger outfits containing a greater quantity and variety of parts.

Each outfit may be converted into the one next higher by the purchase of an Accessory Outfit. Thus, a No. 2 may be converted into a No. 3 by adding to it a No. 2A. A No. 3A would then convert it into a No. 4, and so on. In this way, no matter with which outfit you commence, you may by degrees build up to the largest outfit.

## How to Use the Meccano Electric Motor

The Meccano Electric Motor has been specially designed for running Meccano Models and may be operated efficiently by good dry cells or a storage battery giving approximately 4 volts. If two or three dry cells are used, they should be connected together as illustrated below, the central or positive terminal (1) of the first being connected to the outside or negative terminal (2) of the next, etc. The two remaining terminals (3) should be connected to the motor terminals (4). The connecting of the second motor terminal to the battery sets the

one-way motor in motion. Insulated copper bell wire is recommended for making the connections and can be obtained at any electrical supply store.

The reversing motor has a control lever (5). When this lever is in the central position, as illustrated, the current is off and the motor is "dead." To start the motor move the lever to the right or left according to the motion desired, either forward or reverse.

A little light oil should be applied occasionally to the bearings of the motor.

### The Meccano Transformer

When alternating electric current of 110 volts, 60 cycles is available it can be used to operate the motor through a Meccano transformer. (See page 58.) This transformer is well made and is very efficient; it delivers just the right voltage for Meccano Motors.

### Attaching the Motor to Meccano Models

The sides and flanged base of the motor are pierced with the Meccano standardized holes, so it is a simple matter to build the motor right into the model. The illustration shows the motor attached to Model No. 122—Drop Stamp. The motor is bolted to the flanged plate and a cord is run around the motor pulley (6) and the pulley wheel (8) on the crank handle.

Thus the model can be operated either by hand or by motor, as desired. The crank handle and pulley (8) could also be removed and the motor fixed directly under the table. The cord could then be connected from the motor pulley (6) to the pulley (9) on the upper arm of the model. This would make a more compact and neater model.

When connecting the cord between two pulleys do not make it too tight nor too loose—a little experimenting will be necessary to get the proper tension. Meccano Spring Cord (part No. 58) is ideal for use with pulleys as it automatically adjusts itself to the proper tension. It can be purchased separately at any time.

Be sure that the model operates freely before attempting to drive it with the motor.

### Gears for Meccano Motors

To the driving shaft of the motor is secured a pinion (10) which is used when a positive shaft drive is required instead of a belt drive. A 57-toothed gear wheel (Meccano part No. 27a), secured to a rod passed through hole 7, will mesh with the pinion on the driving shaft, and this gear wheel will rotate much slower than the pinion be-

cause it is a great deal larger. However, although the speed of the second shaft is only about  $\frac{1}{5}$ th the speed of the first shaft, it has about five times the power.

This is known as gear reduction and the procedure may be repeated by using a Meccano pinion on the other end of the rod which goes through hole 7. This pinion can be made to mesh with a gear wheel in the model.

## Model No. 18—Telfer Span

Many hours of enjoyment may be obtained from this model. The illustration shows exactly how it is worked. The cords may be made to any length, and the load carried from one side of the room to the other. In order to give a better grip, the operating cord should be wound twice round the crank handle pulley. The body of the telfer should be screwed down to a solid base with ordinary wood screws, and the pulley bracket screwed in a suitable position on the opposite side of the room.

8 " " 12	2 " " 22A	2 " " 54
3 " " 16	4 " " 35	4 " " 48A

**Model No. 108—Telpher Span**

This model is an improvement on Model No. 18 and as in the case of that model, it will provide many hours of enjoyment. The cords may be made to any length to allow the load to be carried from one side of the room to the other and, if necessary, a better grip may be obtained by winding the operating cord twice round the pulley on the crank handle. The open sides of the bucket may be closed with cardboard so that it may be loaded with marbles, beads, etc. The bed of the Telpher may be screwed on to a solid base with ordinary wood screws to give better support. The pulley bracket and that securing the cord on which the bucket travels should be screwed in a suitable position on the opposite side of the room.

Parts  
required:

2 of No. 1	
2 " " 2	
4 " " 5

1 " " 52	
2 " " 54	
1 " " 57	
2 " " 48A	
2 " " 126A	

These Models can be made with MECCANO Outfit No. 1, or No. 0 and No. 0A

### Model No. 110—Snow Plough

Parts required:

6 of No. 2	1 of No. 24
3 " " 5	4 " " 35
2 " " 10	19 " " 37
1 " " 12	1 " " 44
3 " " 16	1 " " 52
1 " " 17	2 " " 54
4 " " 22	2 " " 48A
2 " " 22A	

Fig. 110A

The construction of the framework of this model presents no difficulty. The sector plate forming the plough is loosely pivoted on the bolts (1). The axle (2) is mounted in the front sector plate and the  $2\frac{1}{2}$ " bent strip (3). A  $2\frac{1}{2}$ " strip (4) is bolted by angle brackets to a bush wheel on the front of the axle and forms a dispersing propeller for the snow after it has risen up the inclined sector plate. A continuous cord (5) is passed around a 1" pulley (6) and round the short axle (7) and a 1" pulley on the propeller axle. In this way, as the plough is moved along the ground, the propeller is revolved.

Parts required:

4 of No. 1	3 of No. 22
4 " " 2	1 " " 24
6 " " 5	6 " " 35
4 " " 10	22 " " 37
2 " " 16	1 " " 52
1 " " 17	2 " " 54
1 " " 19	4 " " 48A

### Model No. 111 Dinner Wagon

Parts required:

6 of No. 2	2 of No. 35
8 " " 5	22 " " 37
4 " " 12	1 " " 52
3 " " 16	4 " " 48A
4 " " 22	2 " " 126A

The two lower platforms are constructed out of pieces of ordinary cardboard, their outer edges resting on  $2\frac{1}{2}$ " bent strips and their inner edges on angle brackets.

### Model No. 112 Roundabout

Begin to build this model by making the platform from a flanged plate and  $12\frac{1}{2}$ " strips. The drive from the pulley on the crank is taken to a 1" pulley fast on a spindle (2), another similar pulley being secured to the spindle beneath the plate. The arms are formed of four  $5\frac{1}{2}$ " strips and bolted to a bush wheel (1) fast on the spindle.

These Models can be made with MECCANO Outfit No. 1, or No. 0 and No. 0A

### Model No. 113—Swivelling Jib Crane

The fixed base of this crane is a perforated flanged plate (1) and the swivelling base of the crane is formed by two sector plates. The jib is formed from two 12½" strips (2) bolted to the ends of the front sector plate, two other 12½" strips (3) being bolted to the top of the strips (2) and two cross strips (4), the outer ends of these latter strips being stayed by the strips (5) bolted to the back sector plate. The upper structure of the crane swivels about a rod and the winding rope, operated by the crank handle passes over a pulley on a short rod in the head of the crane.

6 " " 2	1 " " 24
2 " " 3	34 " " 37
4 " " 5	1 " " 52
1 " " 15A	2 " " 54
1 " " 17	3 " " 48A

FIG. 204A  
(underneath  
view)

The side frames of the gangway are made of  $12\frac{1}{2}$ " strips bolted by means of  $2\frac{1}{2}$ " bent strips to parallel strips below. The side frames are connected by a perforated flanged plate to the underside of which is bolted a bush wheel fitted with a rod on which is mounted a 1" pulley (see Fig. 204A). The rod passes through one of the end holes of the sector plate which is connected by diagonal strips to another sector plate. Through the end hole of the latter a rod is threaded carrying two 1" pulleys from one of which an operating cord passes through the pulley mounted on the under side of the flanged plate. In this way the Gangway may be rotated by an operating spindle.

These Models can be made with MECCANO Outfit No. 2, or No. 1 and No. 1A

21

### Model No. 205—Scales

Parts required:

3 of No. 1	4 of No. 38
4 " " 12	1 " " 52
2 " " 12A	2 " " 54
19 " " 37	2 " " 48A

The slot is formed by inserting 2 washers in the bolts above and below the beam. These washers hold the strips composing the standard at the required distance apart to give the beam free play.

### Model No. 206—Joy Wheel

The driving mechanism and construction of the framework of this model are clearly brought out in Fig. 206A. Cut out a circular piece of cardboard, 8" in diameter, and in the centre of the disc fix a bush wheel by nuts and bolts. The eye of the bush wheel is then threaded over the top of a vertical spindle, and secured by its set-screw.

Parts required:

2 of No. 1	1 of No. 22A
6 " " 2	1 " " 24
6 " " 5	2 " " 35
2 " " 12	28 " " 37
1 " " 15A	1 " " 52
1 " " 19	2 " " 54
3 " " 22	5 " " 48A

FIG. 206A

### Model No. 207 Polishing Spindle

Parts required:

1 of No. 2	1 of No. 15A
4 " " 5	2 " " 22
6 " " 12	1 " " 35
2 " " 12A	16 " " 37
	1 " " 52

These Models can be made with MECCANO Outfit No. 2, or No. 1 and No. 1A

### Model No. 208 Pit Head Gear

Parts  
required:

7 "	48A
1 "	115
2 "	125
2 "	126A

Fig. 245A

Fig. 245B

The bed of the lower carriage framework is formed by bolting two 12½" strips to the sides of a large flanged plate, and two sector plates bolted to the flanged plate by their flanges to form the sides, and a bearing for the spindle carrying the operating cord attached to the bottom of the ladder to raise it from a horizontal position, and the strips (1) form a support for the ladder when in this horizontal position. Angle brackets (2), Fig. 245A, form pivots for the lower part of the ladder, and are carried from the supports (3). The upper part of the ladder, Fig. 245, is slidably guided and retained on the lower ladder by reversed brackets (4). The extension of the ladder is effected by the cranked spindle round a pulley on which (and another pulley at the top of the framework) the cord is passed, the ends being secured to the lower part of the slidable ladder.

These Models can be made with MECCANO Outfit No. 2, or No. 1 and No. 1A

33

### Model No. 246 Ferry Gangway

The vertical standard (1) is built up from two angle girders, the slotted holes overlapping to form a channel section girder.

14 of No. 2	Parts required:	1 of No. 45
2 " " 3	6 of No. 12	1 " " 52
6 " " 5	2 " " 16	2 " " 54
3 " " 8	2 " " 22	8 " " 48A
2 " " 10	2 " " 35	
	54 " " 37	

### Model No. 247 The Acrobat

2 of No. 2	Parts required:	1 of No. 22A
8 " " 5	2 " " 35	
2 " " 10	21 " " 37	
6 " " 12	1 " " 52	
1 " " 19	2 " " 62	

### Model No. 248 Jumping Jack

Parts required:	
2 of No. 2	
12 " " 5	
4 " " 10	
1 " " 24	
18 " " 37	

These Models can be made with MECCANO Outfit No. 2, or No. 1 and No. 1A

### Model No. 249—Turnstile

Parts required:	
2 of No. 1	1 of No. 24
10 " " 2	42 " " 37
9 " " 5	2 " " 38
4 " " 10	1 " " 45
2 " " 12	1 " " 52
1 " " 15	6 " " 48A
1 " " 15A	2 " " 62

### Model No. 251 Cutting Machine

Parts required	
7 of No. 2	
1 " " 3	
1 " " 5	
4 " " 12	
14 " " 37	
1 " " 52	
1 " " 48A	

### Model No. 250 Chair for Wounded

Parts required:	
6 of No. 2	
2 " " 3	
10 " " 5	
2 " " 11	
2 " " 16	
4 " " 22	
21 " " 37	
1 " " 52	
2 " " 48A	

### Model No. 252

### Magic Sector Plates

Parts required:	
2 of No. 11	
1 " " 17	
2 " " 35	
6 " " 37	
2 " " 54	

When the cord is held vertically the magic sector plates will fall or stop at the bidding of the owner. If the cord is held without tension the plates will fall, but the instant the cord is tightened they will stop dead. The cord is wrapped once around the rod which passes through the centre holes of the sector plates.

These Models can be made with MECCANO Outfit No. 2, or No. 1 and No. 1A

### Model No. 253

## Railway Foot Bridge and Signals

Parts required:		
4 of No. 1	1 of No. 11	2 of No. 22A
14 " " 2	2 " " 12	6 " " 35

The lower horizontal ribs (1) and main vertical members (2) are made of angle girders overlapping nine holes, and the diagonal ties (3) of two  $12\frac{1}{2}$ " strips and one  $5\frac{1}{2}$ " strip, the  $12\frac{1}{2}$ " strips being overlapped three holes, and the lower  $5\frac{1}{2}$ " strip seven holes. The pulley (4) is carried in a nosing made of two  $5\frac{1}{2}$ " strips and two  $12\frac{1}{2}$ " strips connected at their apex by a double bracket. The rear swivel point of the crane is made by bolting the gear box (5) to a double bent strip (6) secured to the floor. The crane runs on the flanged wheel (7) and is rotated by means of the worm (8) which engages a pinion (9) on the spindle of one of the flanged wheels and is rotated by the hand wheel (10).

FIG. 305A

FIG. 305B

Begin the construction of this model by building up the platform, Fig. A, the tie strips (1) being left off as shown in order to be able to insert the rising and falling tower, Fig. B. The strips are then bolted on. The guide strips (2) are bolted to the girder (3) of the tower with washers beneath the strips. This gives the necessary clearance and enables the strips to rise easily up the faces of the girders (4) of the fixed lower part of the tower. The tower is raised by means of a cord which passes over a pulley (5) and is fastened to a rod (6), the other end of the cord winding on a rod (7) rotated by a hand wheel (8) on the spindle of the worm (9).

These Models can be made with MECCANO Outfit No. 3, or No. 2 and No. 2A

39

The piston rod (1) of one cylinder is pivotally connected to the crank rod (2) by means of a small double angle strip (3), and the piston rod (4) of the other cylinder is pivoted to the crank rod by a coupling (5). The cylinders consisting of four strips are enclosed by flanged wheels at the ends, and are pivoted on  $\frac{1}{2}$ " reversed brackets (6). The model is operated from the handle rod (7), a pulley on the rear end of which is coupled to the pulley (8) by a cord (9).

These Models can be made with MECCANO Outfit No. 3. or No. 2 and No. 2A

## Model No. 308—Railway Wagon Swivel Crane

FIG. 308A

The flanges of the sector plates (1) are bolted to the 3" pulley wheel (2) upon which the crane swivels, and the spindle of the pulley wheel is rotated by the worm (3) engaging the gear wheel (4) on the spindle. In order to bring the worm centrally over the teeth of the gear wheel (4), washers are placed between the angle brackets (5) in which the spindle of the worm is journaled.

A detailed technical drawing of a mechanical device, likely a testing machine or a specialized lifting apparatus. The device consists of a central vertical column (1) supported by a base (2) and a horizontal beam (3) at the top. The beam is connected to two large, rectangular frames (12) on either side. Various components are labeled with numbers: 1 (central column), 2 (base plate), 3 (horizontal beam), 4 (top joint), 5 (vertical adjustment screw), 6 (vertical guide or support), 7 (base joint), 8 (base plate), 9 (base joint), 10 (vertical guide or support), 11 (top joint), and 12 (side frames). The drawing is a black and white line illustration with hatching for shading.

### Model No. 316—Drop the Nigger

#### Parts required:

- |            |  |
|------------|--|
| 1 of No. 1 | The sector plate 1 is                                    |
| 6 " " 3    | a target, which, when hit,                               |
| 8 " " 8    | allows the nigger to be dropped.                         |
| 1 " " 12   | 6 " " 35 The plate 1 is carried on the strip 2           |
| 3 " " 15A  | pivoted at 3, and the weight of the nigger               |
| 1 " " 17   | supported on another sector plate 4 pivoted at 5         |
| 1 " " 22   | by means of the cord 6 keeps the lower end of the        |
| 6 " " 35   | strip 2 hard against a short rod 7 pivoted at 8. When    |
| 33 " " 37  | the target is hit and knocked back the rod 7 is released |
| 1 " " 44   | and falls about its pivot, allowing the sector plate 4,  |
| 2 " " 53   | with the nigger to drop.                                 |
| 2 " " 54   |  |
| 3 " " 59   |  |
| 4 " " 48A  |  |
| 1 " " 63   |  |

### Model No. 317—Newton's Disc

This is a model to show that white light is made up of the three primary colours—red, yellow, blue. Sectors of these three colours are mounted or painted on the disc, which if then quickly rotated, shows as white.

#### Parts required:

- |             |             |             |

### Model No. 327—Wire Rope Maker

The strands are twisted from both ends by the handles (1) and (2) of the fixed parts. The handle (1) rotates through a large gear wheel (3) two pinions (4) on the rods (5) carrying cranks to which the strands are attached. The other ends of the strands are connected to a double bent strip (6) on a bush wheel which is rotated in the opposite direction by a crank handle (2). The carriage (7) runs on rails and the vertical rod (8) is kept just at the formation of the twisted rope and so controls the tightness of the twist.

Parts required:	2 of No. 5	2 of No. 15	1 of No. 24	50 of No. 37	4 of No. 59

### Model No. 339—Fire Escape

The main frame (1) is pivotally connected to the running truck (2) about the rod (3). Ordinarily the frame (1) rests on the running truck (2) when the escape is being transported. In order to raise the main frame about the pivot rod (3) the handle (4) winds up the cord (5) the outer end of which is connected to the running truck axle in order to raise or lower the ladder (6) the handle (7) is turned in one or other direction, the cord (8) passing over the pulleys (9) and being connected to the rising ladder.

### Model No. 340—Actuated See-Saw

The see-sawing is actuated by the travelling action of the wheels (1). The spindle of the wheels is connected by the cord (2) to the pulley (3) on the spindle of the pinion (4) which drives a gear wheel on the spindle of the bush wheel (5). A threaded pin (6) on this wheel engages the strip (7) coupled to a lever strip (8) pivoted at (9) which rocks pivot rod (10) of the see-saw (11).

#### Parts required:

3 of No. 2	2 of No. 15	1 of No. 26	1 of No. 53
2 " " 3	3 " " 15A	1 " " 27A	3 " " 59

8 " " 8	2 " " 22	36 " " 37	2 " " 62
4 " " 12	1 " " 24	2 " " 52	1 " " 115

These Models can be made with MECCANO Outfit No. 3, or No. 2 and No. 2A

53

### Model No. 341—Hand Car

The car is caused to travel by working the rocking lever (1) which is connected by a strip (2) to a crank shaft (3) and a gear wheel (4) meshing with a pinion (5) on a rod coupled by a cord (6) to an axle rod (7) of the travelling wheels (8).

Parts required:

8 of No. 2	2 of No. 22
1 " " 4	1 " " 26
1 " " 5	1 " " 27A

3 " " 126A	

The driving head (1) is raised by means of a threaded pin (2) on two 2 1/2" strips (3), the pin engaging in the first hole of the driving head. As the head is raised, the strip (3) makes contact with a pulley (4) and the latter pushes the strip rearwardly, disengaging the pin from the hole on the driving head, permitting it to fall. The cross strips (5) of the driving head are duplicated behind, spacing washers being inserted between them on the bolts (6) to allow free movement up and down the guide girders.

These Models can be made with MECCANO Outfit No. 3, or No. 2 and No. 2A

### Model No. 343—Swing Cot

#### Parts required:

4 of No. 1	1 of No. 27A

### HOW TO CONTINUE

This completes the Models which may be made with MECCANO Outfit No. 3. The next Models are a little more advanced, requiring a number of extra parts to construct them. The necessary parts are all contained in a No. 3A Accessory Outfit (see next page).

## The Meccano Accessory Outfits

The illustration at the right shows a specimen of one of the Meccano Accessory Outfits. As we have already explained, these connect the main Outfits, making it possible for a boy to commence with one of the small Outfits and build it up by easy stages until he has the equivalent of the largest Outfit made. For example, if you now have a No. 3 Outfit, the addition of a No. 3A Accessory Outfit will convert it into a No. 4, with which a number of bigger and better models can be built. The further addition of a No. 4A Accessory Outfit will build your equipment into a No. 5 Outfit. By adding a No. 5A Accessory Outfit you will have all the parts included in the No. 6, which is the largest one made. You will then be able to build all of the 326 models shown in the two big Manuals and also be able to invent new models. For prices see page 58.

*Accessory Outfits do not contain Motors or Transformers*

## The Meccano Electric Motors

belt drive and a pinion for gears; and the E-2, which is reversible and includes extra gears. For prices see page 58.

How splendid it is, after spending hours in building a model, to be able to set it in motion with an electric motor, just as real engineers do! The Meccano Electric motors are made especially for this purpose and may be run from three dry batteries or direct from the house current with the Meccano Transformer. They are designed to be built into Meccano models and are the most powerful toy motors made. Two types are available—the E-1, a one-way motor which is fitted with a pulley for

## The Meccano Clockwork Motor

This motor serves the same purpose as the electric motors and is a fine piece of mechanism—simple, powerful and reliable. It is provided with the standard Meccano equidistant holes and can be built right into the model and form a rigid part of it. A starting and stopping lever is provided, and the motor is also fitted with reverse mechanism. For price see page 58.

## The Meccano Transformer

Specially constructed to operate Meccano Electric Motors from the house current. A safe and reliable instrument that eliminates the expense of batteries. For alternating current of 110 volts, 60 cycles only. For price see page 58.

## A Few Choice Meccano Models

On this page we illustrate some splendid examples of the larger models that can be built with Meccano. Each one of these is a perfect working model, accurate in every detail. They represent the genius of generations of engineering experts, and will give any boy who builds them many hours of enjoyment in addition to a sound knowledge of the construction and operation of the actual mechanisms.

### Hydraulic Crane

This model illustrates the operation of a Hydraulic Crane, in which great power is utilized to force two or more sets of pulley wheels apart; it is so arranged that a great movement of the load is obtained by a small movement of the operating power.

### Theodolite

A Theodolite is an instrument with which angles and inclinations can be accurately and rapidly determined and distances calculated. It is used by surveyors and civil engineers for measuring plots of land, etc. The model Theodolite illustrated is easy to build and any boy can have a lot of fun with it.

### Revolving Crane

Another type of crane in which the movements of both the hoisting pulley and the jib are controlled by one handle. Clutches are provided for engaging either the pulley or jib gears, and the entire crane is mounted on four wheels at right angles to each other, and they may run on rails or on a flat surface to turn the crane around.

*Covers of six recent issues  
of The Meccano Magazine*

## The Meccano Magazine

The Meccano Magazine is the Meccano boy's own newspaper. It keeps him constantly informed of the latest news from Meccano headquarters—new models, prize contests, new parts, what other Meccano boys are doing, helpful hints on model-building; also interesting articles on engines, airplanes, bridges and other engineering wonders of the world. In each issue the Editor replies to letters from his readers. It is published every second month throughout the year and is mailed regularly to subscribers at the rate of 25 cents for one year (6 issues). Every Meccano boy should subscribe to it as it will help him to get much more pleasure from his Meccano outfit.

If you have not seen a copy of this fine magazine, write to the Editor, Meccano Magazine, Elizabeth Avenue, Elizabeth, N. J., and he will send you a copy free.

# Meccano Price List

## Complete Outfits

For convenience Meccano parts are sold in Outfits of varying size. The quality and finish of the parts are of the same high standard throughout the series. Each Outfit listed below is complete with necessary tools and illustrated instructions.

No. 00 Outfit.....	\$1.00	No. 3 Outfit.....	\$ 9.00
" 0 "	2.00	" 3x* "	10.00
" 1 "	3.00	" 4* "	15.00
" 1x* "	5.00	" 5* "	25.00
" 2 "	6.00	" 6* "	45.00
" 2x* "	7.50	*Has electric motor.	

## Accessory Outfits

Each of the Complete Outfits may be converted into the one next larger by the purchase of the connecting Accessory Outfit. In this way, no matter with what Outfit you commence, you can build it up by degrees until it equals the largest Outfit made.

No. 0a.....	converts a No. 0 into a No. 1	\$ 1.25
" 1a.....	" " " 1 " " " 2	3.00
" 2a.....	" " " 2 " " " 3	3.00
" 3a.....	" " " 3 " " " 4*	6.00
" 4a.....	" " " 4 " " " 5†	7.50
" 5a.....	" " " 5 " " " 6	20.00
*Except Motor.		†Except Transformer.

## Meccano Motors and Transformers

### Electric Motors

The Meccano Electric Motors are especially designed to operate Meccano models and are simple, strong and durable. They can be built right into the model and form a rigid part of it. Run on 6-8 volts and can be used with batteries or transformer.

E-1 Electric Motor, one-way, with pulley and pinion.....	\$3.50
E-2 Electric Motor, reversing, with pulley and pinion.....	4.50

### Clockwork Motors

A strong and serviceable motor that is designed to work Meccano models. It is equipped with control levers for starting, stopping and reversing, and all its movements are fully described in the leaflet accompanying it.

Meccano Clockwork Motor .....Each \$3.00

### Meccano Transformer

For operating Meccano Electric Motors direct from the house current. Safe and convenient; has no moving parts. For 110 volts, 60 cycles alternating current only. Each \$2.50

147	Pawls, with pivot bolt and nuts													1
148	Ratchet Wheels													1
	Electric Motors													1
	Transformers													1

NOTE: Outfits Nos. 1x, 2x and 3x have the same contents as Outfits Nos. 1, 2 and 3 respectively, and in addition an Electric Motor.

## Meccano Standard Mechanisms The Standard Reference Book for Model-builders

From time to time a number of Meccano movements have been designed and have become standardized—they may be applied to many models without alteration. These have been collected and classified and are now published in this new book. The various movements have been arranged so that immediate reference may be made to any particular motion that it is desired to incorporate in a model. At the left is illustrated one of the many standardized movements dealt with in this book; among the others are the following:

### Partial List of Contents

GEAR RATIOS  
PULLEYS AND PULLEY BLOCKS  
LEVERS, BRAKES  
CLUTCHES AND REVERSING GEARS  
DRIVE CHANGING MECHANISM  
ROLLER AND BALL BEARINGS  
SCREW MECHANISM  
STEERING GEARS, ETC., ETC.

#### Screw Adjustment

In this example the use of the Threaded Rod for adjusting the height of the table of a drilling machine is illustrated. The construction is fully described in "Meccano Standard Mechanisms."

### Every Meccano Boy should have a Copy

This new book is of special value to the boy who likes to invent new models and will give him much help in incorporating correctly designed movements in his models. No keen Meccano boy will consider his equipment complete without a copy of "Meccano Standard Mechanisms." The price of this new manual is 50 cents and a copy will be mailed to any address postpaid on receipt of remittance.

Design Patent July 4, 1916

PATENTED THROUGHOUT THE WORLD

## Meccano is more than a Toy

**I**T is important to remember that when a boy is playing with MECCANO he is using engineering parts in miniature, and that these parts act in precisely the same way as do the corresponding engineering elements in actual practice. No other system of model construction can be correct, and other toys which attempt the same object by other methods must avail themselves of constructive elements which are not correct engineering elements. Consequently, though a boy may succeed in building playthings with them, they are merely toys and nothing else.
