'PERFECT' CHILD'S PLAY

BAYKO

BUILDING SETS

The Wonderful reception given to BAYKO BUILDING SETS and the enthusiasm and satisfaction expressed on all sides, is quite easily explained.

BAYKO PARTS are beautifully moulded from attractively Coloured Plastics.

Clean, hygienic and easily sterilized by placing in boiling water or diluted antiseptic, these Sets are ideal for children incapacitated by sickness or disease.

Easy to handle, yet firm and rigid in construction, each model is an excellent replica of the actual building. There is no limit to the range of models that can be built.

Wonderfully constructed, each part fits perfectly into position.

These interesting and fascinating BAYKO Sets awake a common interest in both young and old alike.

A Skyscraper, over 6-ft. high, has been constructed, and, except for the extra lengths of Rods, was constructed entirely from Standard Parts.

The models shown in this booklet are only put forward as suggestions. Many others can be built from the ideas and ingenuity of the builder.

One can further increase the scope of Model Building by the purchase of a Conversion Set. Thus, by purchasing a No. 0X Set, one converts a No. 0 Set into a No. 1 Set, and so on.

Converting Sets cannot alone be used for building models, but must be used with one of the Standard Sets.

Only by actually building any of the hundreds of models, can one realise the spirit of achievement and satisfaction derived from building with BAYKO BUILDING SETS.

Many new parts, detailed and illustrated from page 33 onwards, are now available, and when used in conjunction with any standard set add greatly to their scope and variety. Certain of these new parts are contained in sizes 3X and 4, which are now available. These parts and also those contained in standard sets may be purchased separately ONLY from your dealer.

Sizes of Standard BAYKO BUILDING SETS

| | | | | | |
|-----------|------|------|------|------|--------------------------------------|
| No. 0 SET | | | | | No. 0X — CONVERTING No. 0 INTO No. 1 |
| No. 1 SET | | | | | No. 1X — CONVERTING No. 1 INTO No. 2 |
| No. 2 SET | | | | | No. 2X — CONVERTING No. 2 INTO No. 3 |
| No. 3 SET | | | | | No. 3X — CONVERTING No. 3 INTO No. 4 |
| No. 4 SET | | | | | |

You can see from the above sizes of "BAYKO" BUILDING SETS, that, by purchasing Converting Sets, it is possible to increase from your present Set, right up to No. 4 Set.

HOW TO BUILD A "BAYKO" MODEL

After deciding which model you want to build, count out the listed parts necessary for doing so. It is a good plan to choose a model from a No. 0 size to commence with should you have a large set, in order to first become acquainted with the method of building.

Join the bases, when necessary, by means of the base links as shown on Page 4. Place the rods in the positions marked on the plan, taking care to use the correct lengths. Use standard length rods as marked on each diagram, except where otherwise indicated, for example—on Page 9. Entrance Gateway Model has standard 3 Brick Rods, except where figures 1 and 2 Brick Rods are placed. The same applies to all models.

Now fit bottom row of parts in position exactly according to plan, the particular part being indicated by its initial letter.

By referring to the diagram on Page 4 the method of fitting Bayko parts is clearly shown. Particularly notice the method of using curved bricks and curved windows and study notes 3 and 6 underneath the diagram shown overleaf.

It is helpful to use Tie Bars and Corner Ties after the 3rd row of building.

Below are illustrated methods of using certain parts

Use of Canopy. Note Corner Tie as support

Use of two sets of Steps

Sectional Roof complete, showing End Section

Method of assembling Sectional Roof

METHODS OF USING

BAYKO

PARTS

1. Corner made by using End Brick with ordinary Brick.
2. Door plus Half Brick equals three Bricks in height.
3. Commencement of Full Bay Window; note wires are placed through the OUTSIDE hole ONLY.

7. Long Brick, two of which are equal in length to three Bricks.

4. Method of interlocking Bricks.
5. Brick, Window and Half Brick equals three Bricks in height.
6. Commencement of Small Bay Window; note wires are placed through the INSIDE hole ONLY.

YACHT CLUB BOAT HOUSE No. 2

BUILDING SET No. 2

A colorful illustration of a small, single-story house. The house has a steep, red-tiled roof with a central chimney. The walls are white with a brick pattern, and the base is made of red bricks. There is a green door in the center and two windows with green frames on either side. A small porch with three steps leads to the door. The house is set on a green lawn.

A detailed illustration of a two-story house. The house has a steep red gabled roof with a large red brick chimney on the left side. The upper story has white walls with green window frames and a small balcony. The lower story features a red brick base and a front porch with white columns. A small garden area with a green lawn and a red brick fence is in the foreground. The house is set on a green base.
