Recreate the iconic Vulcan Bomber with this all-inclusive construction set.

This high altitude, delta wing, jet-engine bomber operated with the RAF from 1956 - 1984.

The Vulcan bomber was designed to utilise high-speed and high-altitude flight to evade interception by enemy fighters and missiles.

It was one of three V-bomber designs operated exclusively by the Royal Air Force and it carried a crew of five.

Now you can build your very own Vulcan Bomber at home with this all-inclusive construction set.

Also available in the range

Tornado Combat Jet

Harrier Jump Jet
