## Intro: How to make a XY-plotter with Makeblock

Last month, I made a XY-plotter by Makeblock and use it to built a Drawing Robot.

This Drawing Robot was built with two Linear Motion Shaft D8x480mm, two Long Beam0824, the timing belt, two stepper motors, two stepper motor driver, and a micro-controller Arduino. You can send a picture from the phone or you can take a picture by the phone and then send it to the robot by Bluetooth. After that the robot will draw what you send.
