it gives you -*

TRIX

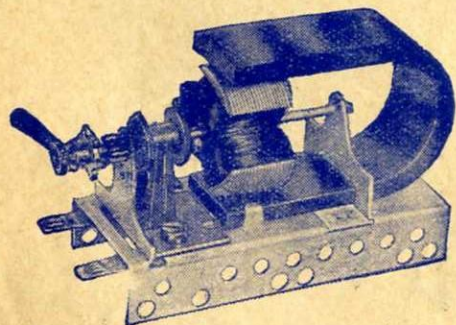

British Patent Nos. 363547, 383087, 383240, 421924, 413963.
Patented abroad.

TRIX makes model-building so much more exciting! For with TRIX you can build such things as the Big Wheel (pictured opposite), bridges, locomotives, aeroplanes, etc., all of which actually "work"—just like the real thing!

Another great advantage of TRIX is that you need spend no more than 7½d. for your first set. Then, when you wish to tackle bigger and better models, you simply add to your equipment box by box.

In this folder is shown the whole new range of TRIX Constructional Sets—from the original TRIX No. 1 to the really magnificent TRIX Major, which contains no fewer than 699 pieces including the sturdy TRIX Electric Motor. There are two types of this little power-unit, which drives TRIX or any other Constructional Set models. Both are built with the utmost care and skill and transmit tremendous power for such small machines. (The Moto-Trix outfit gives you a fine introduction to these famous little motors.)

Remember that when you buy a Trix outfit there are *no extra parts to buy*; *no expensive accessories*; and that only with TRIX can you *build, drive and light models, and put them in gear*!

TRIX MOTORS

No. 2051.
